FLAMMABILITY CLASSIFICATION DOT Combustible Liquid

OSHA Combustible Liquid Class II OSHA Class 29 CFR-1910-106a

AUTO IGNITION Not TEMPERATURE Determined

IN WATER

SOLUBILITY Insignificant REACTIVITY IN WATER See Section IV

APPEARANCE AND ODOR Grey liquid with odor typical of petroleum distillates.

EXTINGUISHING MEDIA Approved Class B Fire Extinguisher, foam or dry chemical. DO NOT USE WATER. Combustion in a limited amount of air can generate toxic carbon monoxide. Use full protective equipment and self-contained breathing apparatus for respiratory protection in fighting fires in enclosures. In a fire situation or when the material is heated it becomes a highly flammable liquid with a moderate explosion hazard. Once ignited the product will burn readily in air.

UNUSUAL FIRE AND EXPLOSION HAZARDS. Keep containers_closed tightly. Isolate from heat, electrical equipment, sparks and open flame. Zinc present in a finely divided form, is hazardous when atomized in air and, if sparked, explosion is possible. Closed containers may explode when exposed to extreme heat. Application to hot surfaces requires special precautions. During emergency conditions, overexposure to decomposition products (gaseous oxides of carbon and nitrogen) may cause a health hazard. Symptoms may not be immediately apparent. Obtain Medical Attention. Heavier than air vapors may flow along surfaces to distant ignition sources and flash back. Moisture and acid contamination can result in hydrogen gas evolution, causing cans to bulge with increased pressure. Cans so deformed should not be moved, opened or punctured, Call (617) 328-6700. See also Sections IV and V.

SPECIAL FIRE FIGHTING PROCEDURES DO NOT USE WATER IN ANY FORM, Water may be used to cool closed containers to prevent pressure build up and possible autoignition or explosion when exposed to extreme heat, but care should be taken to prevent water access to wet paint and spray residues. See also Section VII.

^{*}CAS #same identification numbers assigned by Chemical Abstract Service for reference to hazardous information on file at the American Chemical Society. For information call 1-800-848-6538. For health emergencies call Poison Control Center (24 hours at 1-213-664-2121, for transporation emergencies call CHEMTREC 1-800-424-9300.

Section IV - PHYSICAL HAZARDS

STABILITY OF STABLE

D UNSTABLE

ABLE HAZARDOUS POLYMERIZATION

MAY OCCUR

MATERIALS AND CONDITIONS TO AVOID The material is considered to be stable under it's normal handling and storage conditions. It can react violently with strong oxidizing agents such as chlorine and oxygen, as well as water and weak and concentrated acids. Store in dry areas away from oxidizing agents (chlorine, oxygen), all acids, alkalies and water. Avoid dusting and accumulations of spray residues.

MAZARDOUS DECOMPOSITION PRODUCTS Water and alkali contact will produce hydrogen with additional risks of ex-

plosion and fire. May produce fumes of zinc oxides and the oxides of carbon and nitrogen when heated to decomposition.

Section V - HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE 100 ppm

OSHA PERMISSABLE EXPOSURE LIMIT

Mixture (See Section 11)

PRIMARY ROUTE OF ENTRY Inhalation and skin contact.

MEDICAL CONDITIONS GENERALLY Respiratory conditions, dermatitis AGGRAVATED BY EXPOSURE and other skin afflictions. Conditions of the central nervous system.

SIGNS AND SYMPTOMS OF CVER-EXPOSURE A.) Acute:-Solvents contained in the mixture are central nervous system depressants. Symptoms of overexposure include drowsiness, dizziness, headache, slurred speech, intoxication with euphoria and/or depression leading to stupor and unconsciousness. Nose and throat irritation may occur from inhalation. Skin contact may cause defatting and dermatitis. Eye contact with the liquid causes tears, burning, irritation, conjunctivitis. Ingestion will cause poisoning and may be fatal; Avoid aspiration if ingested. Do not induce vomiting. Lung contact may cause chemical pneumonitis. During welding and burning operations hazardous decomposition products may be evolved from the dried film, these may include but not be limited to zinc oxides as well as gaseous oxides of carbon and nitrogen. Excessive inhalation of these fumes may produce symptoms known as fume fever and "zinc shakes" among other effects. Consult physician. B.) Chronic:-Reports have associated repeated and prolonged over exposure to solvents with permanent damage to the brain and central nervous system.

EMERGENCY AND FIRST AIR PROCEDURES

- Inhalation: Remove to fresh air. Keep warm and quiet. Give artificial respiration if required. Get medical assistance.
- 2.) Eyes: Wash eyes immediately with large amounts of water for at least 15 min. Take to physician for medical attention.
- Skin: Wash contact area promot! with soap and water. Promptly remove paint wet clothing. Consult physician
 if irritation persists.
- 4.) Ingestion: Do not Induce vomiting without medical advice. Contact a physician, emergency room or Poison Ctr. immediately. Observe all rules of good hygiene during and after use. Wash thoroughly before smoking or eating.

Section VI - SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION in outdoor or open areas with unrestricted ventilation, use approved high efficiency mechanical respirator to remove particles of overspray during spray application. In areas of restricted ventilation, use high efficiency chemical/mechanical filters designed to remove a combination of particulates and vapor. In confined areas use approved air line type respirators or hoods.

VENTILATION Work place areas require exhaust venitiation in accordance with OSHA regulation 29 CFR Part 1910 (1070) to maintain vapor levels below the TLV (especially during spraying, misting, or heating). Use an approved high efficiency respirator of the full face canister type (for limited time and concentrations), air supplied type of self-contained type respirators (for extended exposures involving high or unknown vapor concentrations or for non-routine or emergency conditions). Exhaust levels should be maintained at least 100 lfm.

PROTECTIVE GLOVES Neoprene gloves and aprons should be used to prevent prolonged or repeated skin contact. Use protective creams when skin contact is likely.

EYE PROTECTION Safety goggles with unperforated side shields or face shield should be used where splashing of solvent into eyes is possible. An eye wash fountain should also be available in areas where splashing is probable. When large amounts of material are used, a safety shower should be available.

OTHER PROTECTIVE EQUIPMENT Ventilation equipment should be explosion-proof, and any tools used in the area should be of the non-sparking type. Wear chemical resistant boots. Remove and wash or discard contaminated clothing.

Section VII - SPECIAL PRECAUTIONS - SPILL OR LEAK PROCEDURES

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE This combustible liquid should be stored in a cool, clean, well ventilated, fire resistant storage room or in a solvent storage cabinet that meets OSHA requirements. Store only in totally closed cans with identifying labels that indicate the flammability of the material. Store large quantities only in buildings in compliance with OSHA 1910.105. Electrically interconnect and ground containers for transfer of liquids to avoid fires from static sparks. Areas of use and storage for this material should have good ventilation and all sources of open flame and high heat should be excluded. Prohibit smoking in these areas. Ensure sufficient ventilation to prevent accumulation of heavy vapors in low lying areas or sumps. Do not store above I40°F (40°C). Material is electrically conductive. Do not apply by electrostatic spray equipment, unless equipment is modified for use with such coatings by equipment manufacturer. See also Section III & IV.

OTHER PRECAUTIONS Do not take internally. Avoid prolonged contact with skin. Keep away from children. Do not puncture, drag or slide container. Empty containers may contain flammable residues and explode if heated when sealed

See also Section IV.
STEPS TO BE TAKEN IN CASE MATERIA: IS RELEASED OR SPILLED For massive spills, evacuate the area. For all spills eliminate ignition sources. Dike and contain spills with dry inert materials (sand, earth, etc.). Eliminate all sources of molsture, and do not use water in clean up operations. Recover as much of the free liquid as possible for disposal, and use an absorbent to pick up the residue. Avoid discharging paint directly into a sewer or surface waters. Do not flush spills with water. Use non-sparking tools only. Spilled material may be slippery on floors.

WASTE DISPOSAL METHOD Dispose of the absorbed material or the free waste liquid in dry containers. Dispose of all materials including empty cans according to local, state and federal regulations. Do not incinerate, do not flush to sewers. Containers may explode if heated even when empty. It is recommended that solid waste be landfilled only at approved hazardous disposal sites using approved contractors.

DISCLAIMER: While the data and suggestions contained herein are based on information we believe to be reliable, it is furnished without warrarty of any kind. Users should consider these data only as a supplement to other information gathered by them and must make independent determinations of suitability and completeness of information from all sources to assure proper use and discosal of these materials and the safety and health of employees and customers.

OSHA PERMISSABLE EXPOSURE LIMIT

Mixture. (see Section 11)

PRIMARY ROUTE OF ENTRY Inhalation and skin contact MEDICAL CONDITIONS GENERALLY Respiratory, brain and central AGGRAVATED BY EXPOSURE nervous system conditions, dermatitis and other skin afflictions. Reports have linked methylene chloride exposure and cardiovascular problems.

SIGNS AND SYMPTOMS OF OVER-EXPOSURE

Propane is an asphyxiant. Solvents contained in the mixture are central nervous system depressants. Symptoms of overexposure include drowsiness, dizziness, headache, slurred speech, intoxication with euphoria and/or depression leading to stupor and unconsciousness. Nose and throat irritation may occur from inhalation. Skin contact may cause defatting and dermatitis. Eye contact with the liquid causes tears, burning, irritation, conjunctivitis. Ingestion will cause poisoning and may be fatal; Avoid aspiration if Ingested. Do not Induce vomiting. Lung contact may cause chemical pneumonitis. During welding and burning operations hazardous decomposition products may be evolved from the dried film. These may include but not be limited to zinc oxides as well as the gaseous oxides of carbon and nitrogen. Excessive inhalation of these fumes may produce symptoms known as fume fever and "zinc shakes" among other effects. Consult physician, b.) Chronic: Reports have associated repeated and prolonged overexposure to solvents with permanent damage to brain and central nervous system. Methylene chloride may produce an increase in carboxy hemoglobin. Methylene Chloride is considered to be a carcinogen by the National Toxicology Program, the International Agency for Research on cancer, or the Occupational Safety and Health Administration (Suspected in Animals).
EMERGENCY AND FIRST AID PROCEDURES

Inhalation: Remove to fresh air.Keep warm and quiet, Give artificial respiration if required. Get medical Eyes: Wash eyes immediately with large amounts of water for at least 15 minutes. Take fical attention.
 Skin: Wash contact area promptly with soap and water. Promptly assistance. to physician for medical attention. remove paint wet clothing. Consult physician if irritation persists.

4.) Ingestion: Do not induce vomiting without medical advice. Consult a physician, emergency room or Poison Center immediately. Observe all rules of good hygiene during and after use. Wash thoroughly before smoking or eating.

Section VI - SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION in outdoor or open areas with unrestricted ventilation, use approved high efficiency mechanical respirator to remove particles of overspray during spray application. In areas of restricted ventilation, use high efficiency chemical/mechanical filters designed to remove a combination of particulates and vapor. In confined areas, use approved air line type respirators or hoods.

VENTILATION Work place areas require exhaust venitlation in accordance with OSHA regulation 29 CFR Part 1910 (1970) to maintain vapor levels below the TLV (especially during spraying, misting, or heating). Use an approved high efficiency respirator of the full face canister type (for limited time and concentrations), air supplied type of self-contained type respirators (for extended exposures involving high or unknown vapor concentrations or for non-routine or emergency conditions). Exhaust levels should be maintained at least 100 lfm.

PROTECTIVE GLOVES Neoprene gloves and aprons should be used to prevent prolonged or repeated skin contact. Use protective creams when skin contact is likely.

EYE PROTECTION Safety goggles with unperforated side shields or face shield should be used where splashing of solvent into eyes is possible. An eye wash fountain should also be available in areas where splashing is probable. When large amounts of material are used a safety shower should be available.

OTHER PROTECTIVE EQUIPMENT Ventilation equipment should be explosion-proof, and any tools used in the area should be of the non-sparking type. Wear chemical resistant boots. Remove and wash or discard contaminated clothing.

Section VII - SPECIAL PRECAUTIONS - SPILL OR LEAK PROCEDURES

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE This extremely flammable liquid should be stored in a cool, clean, well ventilated fire resistant storage room or in a solvent storage cabinet that meets OSHA requirements. Do not store in direct sunlight. Store large quantities only in buildings in compliance with OSHA 1910.105. Areas of use and storage for this material should have a good ventilation and all sources of open flame and high heat should be excluded. Prohibit smoking in these areas. Ensure sufficient ventilation to prevent accumulation of heavy vapors in low lying areas or sumps. Avoid prolonged contact with skin. Do not puncture, drag or slide container. Do not store above 120°F.

OTHER PRECAUTIONS Any deformed cans should not be moved, opened or punctured., call (617) 328-6700. Do not take internally. Keep away from children. Empty container may contain extremely flammable residues and

explode if heated.

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED For massive spills, evacuate the area. For all spills eliminate ignition sources. Dike and contain spills with dry inert materials (sand, earth, etc.). Eliminate all sources of moisture, and do not use water in clean up operations. Recover as much of the free liquid as possible for disposal, and use an absorbent to pick up the residue. Avoid discharging paint directly into a sewer or surface waters. Do not flush spills with water. Use non-sparking tools only. Spilled material may be slippery on floors.

WASTE DISPOSAL METHOD Dispose of the absorbed material or the free waste liquid in dry containers. Dispose of all materials including empty cans according to local, state and federal regulations. DO NOT INCINERATE, do not flush to sewers. Containers may explode if heated even when empty. It is recommended that solid waste be landfilled only at approved hazardous disposal sites using approved contractors.
